Subject: Re: galley vent for KNORR = KN219?

Hi Chad,

I wanted to add another detail to our loading the frames on the KNORR on the 15th. We will have to have the ship personnel remove the "galley exhaust vent" prior to loading the ship-board frames to install the custom modified (designed by Glosten Naval Architects) exhaust manifold like we used last time. I've enclosed two pics of this exhaust manifold that the crew changed out for ICEALOT 08'. We channel the exhaust tubes aft along the port side 40'~. We plan on assembling the frames on the 14th.

regards,
Drew
