

Reddy Oil Spill Project: Overview

Following the *Deepwater Horizon* oil spill, coastal beaches were oiled. Some remnants continue to persist and provide invaluable clues on the fate of oil in the marine environment. To track such changes, samples are being collected for concurrent and future analyses.

This website lists information on oil-samples collected along the Gulf of Mexico from the *Deepwater Horizon* oil spill or other sources, too.

Samples were collected in all of the Gulf states except Texas. If you are interested in obtaining a piece of a sample please select the "Request" button from the list on the [View All Samples](#) page.

Principal Investigator

Christopher Reddy
Senior Scientist, Marine Chemistry & Geochemistry
Director, Coastal Ocean Institute
