Synergistic Activities: My research has focused on understanding physical processes in the coastal ocean, and more recently, on how physical processes can influence biological patterns and processes. In addition to working with graduate students and postdocs to help train the next generation of coastal physical oceanographers, I am presently serving on the U.S. GLOBEC Georges Bank and Southern Ocean executive committees, the Palmer LTER science steering committee, and since 1992, the EPA/MWRA Outfall Monitoring Science Advisory Panel.
