Woods Hole Oceanographic Institution BENEATH the SURFACE

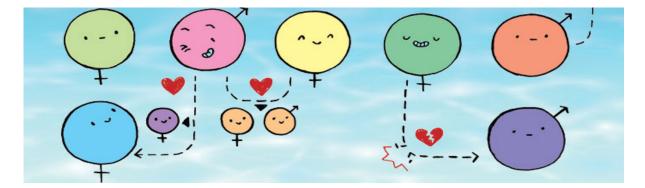

FEBRUARY 2016

FEATURES

Robotic Vehicles Offer a New Tool in Study of Shark Behavior

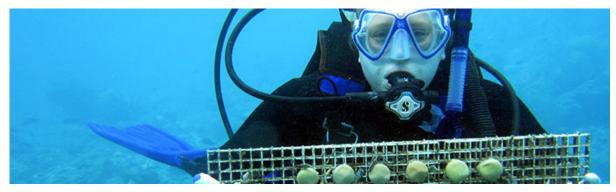

The REMUS SharkCam has enabled groundbreaking scientific understanding of great white sharks.

Sex, Games, and the Evolution of Gender Gaps

Just in time for Valentine's Day, MIT-WHOI Joint Program graduate Esther Shyu describes her models for understanding how sex ratios affect ecology, evolution, and the odds of finding a mate.

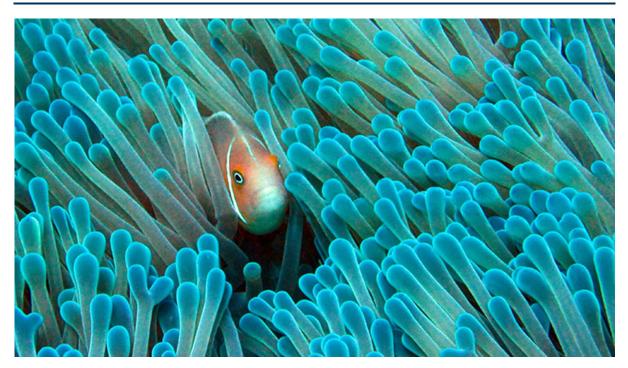

WHOI

Coral Crusader

Racing against time to predict the fate of corals in a warming ocean

o IMAGE OF THE MONTH

Safe Haven: An anemone fish finds refuge in its namesake location--an anemone. This pair were photographed in the <u>Phoenix Islands Protected Area</u> (PIPA), a place that has drawn <u>attention from scientists</u> of late for its size and location. At nearly the size of California, PIPA is one of the world's largest marine protected areas and is situated in the middle of the Pacific far from most forms of direct human impact. As a result, it is increasingly used as a benchmark from which to measure the effects of global environmental change, such as <u>warming</u> and <u>ocean acidification</u>, on marine ecosystems worldwide. (Photo by Hanny Rivera, Woods Hole Oceanographic Institution)
